Thanks Peter.

One last question: is the mobile lab the Region 9 mobile lab or is it the ERT SERAS contract Toga Bus?

Thanks for your help. Don't kill yourself looking for the gas receipt. If you find it great, if not, we'll deal with that later. Good luck out there.

Kathy,

1) The mobile lab costs will be the cost of the contractor who drove it here and I hope will drive it back, and the cost of gas to get it here and back. I have 3 gas receipts that total \$161.95. I was told one receipt was lost - I will try to get a cost for that. I would assume about \$50 based on the others. The gas costs for return will be about the same.

2) The mobile lab left the Region 9 Lab on Friday 8/14 and arrived here at Farmington on 8/15 around 16:00.

3) I arrived on Friday 8/14 via air. I really hope to leave by late Tuesday 8/18, but it depends on deployment of the equipment. I am not sure when the mobile lab will return. I will ask the OSC in-charge here, Bret Moxley.

There is not really a daily rate on its use, as it is just a place to do calibrations or -----Original Message-----

Hi Peter,

Are you working on the Gold King Mine response? If so, I think Kay Lawrence told me you responded to Farmington with the mobile lab, is that correct?

I'm the Finance Section Chief for the response and need some information:

1. What is the daily burn rate for the mobile lab? Please include move and demove.
2. When did you deploy the mobile lab?
3. When is it anticipated that you and the mobile lab will return?

Thanks,
Kathy
